

STATEMENT OF PURPOSE

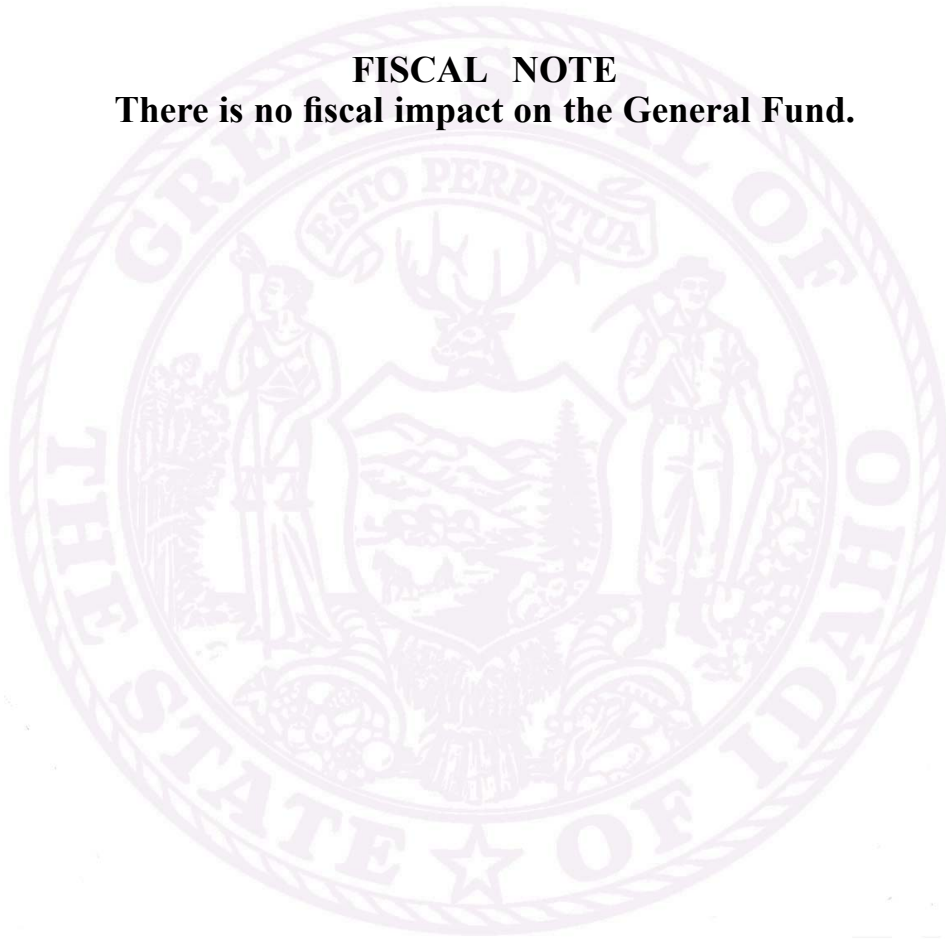

RS20992

This legislation exempts low voltage (under 90 volts) installations from state regulatory oversight, which includes: licensing, permitting, apprenticeships, state or local inspections, etc. Idaho Code 54-1001 now appears to require this oversight on low voltage installation of telephones, speaker systems, computer systems, home theater systems, stereo systems, etc., where it has never been required.

This legislation simply makes clear that the oversight, with its resulting fees, permits and licensing costs, is not required.

FISCAL NOTE

There is no fiscal impact on the General Fund.
